
850 UNIFLAME Cast Iron Surface Treating Burner

FB850A

Description

The series 850 cast iron burner is widely used in flame surface treating applications. A variety of ribbon patterns provide this burner with the versatility to treat any web. For speeds in excess of 1500 feet per minute two burners may be required.

The burner is available in single slot ribbon design assemblies only. These assemblies are made to order for the specific applications.

Four channels of external water cooling minimizes burner deflection over burner width's in excess of 6 meters.

Features

1. Long lasting cast iron construction
2. Variety of ribbon patterns
3. Special Wide Slot ribbon patters eliminate striations or laning
4. External water cooling minimizes burner deflection

Please consult Flynn Engineering for specific applications.
