

XTRUded Selective Flame Distributor Burner

Description

The Flynn Selective Distributor burner provides lateral flame adjustment to equalize product color and moisture across the band. Illustrated below are the various flame patterns available. This Burner, with a larger cross section and smooth walls, is designed to minimize pressure drops offering superior uniformity, higher capacity, and good turn-down.

- Single Point Adjustment.
- Interchangeable with existing cast iron band burners
- Suitable for use with natural gas, propane and butane.

Level distribution across the entire flame space

Near Side has a higher output distribution

Far Side has a higher output distribution

Center has a higher output distribution

Ends have higher output distribution

*Zone space determined by customer

**LEFT HAND FIRING SHOWN
